about

I am an enthusiastic junior full stack web developer with a focus on empathetic team working. I take an Agile approach to planning projects and have particular interests in web accessibility and AI.

With a varied background in merchandising, hospitality, and education, I tackle design from a real-world angle. My switch to web development was inspired by my undergraduate studies in French and Italian at Cambridge University. It is exciting to use my linguistic skills to work with coding languages - I love creating human-computer communications that benefit end users.

I am a current student on the School of Code bootcamp where we focus not only on core developer skills (JavaScript/React, UX/UI) but also on mindset and teamwork.

When I am not in the full flow of coding or at local tech events and meetups, I enjoy hiking on the South Downs, sea swimming, knitting and crochet. I am also learning Modern Hebrew to complement my knowledge of Biblical Hebrew.

contact

Send me an email or give me a call to discuss how we can work together:

networking

As well as being part of the School of Code community, I enhance my skills and keep up-to-date by joining in with the huge variety of tech groups in Brighton.

I regularly take part in Codebar for one-to-one technical support from established local developers as well as attend talks and debates on topics such as AI and the local JavaScript Meetup.

Through my networking, I am making connections to start building a collaborative coding 'salon' for interested people to come together and code - whether for fun, study, or work.
